HOLD THE BLOCK

Two players. Six fighters each. Six rounds. A self-contained first battle using identical capabilities, with colours and unit IDs to tell the crews apart.

Board diagram: 48 x 48 inches. Grid squares are 6 inches; coordinates run from the lower-left corner. Copy the layout approximately with suitable terrain.

> WIN BY HOLDING OBJECTIVES

Place three **6-inch-diameter objective areas**, centred at (12,24), (24,24) and (36,24). Mark the centres and measure 3 inches outwards.

At each End Phase, score **1 VP per objective you alone control**. A fighter counts if its base overlaps the ground-level area and it is conscious, not Captured and has no morale condition. Pinned fighters can count.

If both crews have an eligible fighter in an area, it is contested: neither scores. Numbers do not break a contest. Most VP after round 6 wins; equal VP is a draw.

A crew with no conscious fighters left on the board loses immediately. If both lose their last conscious fighters simultaneously, draw. Declared withdrawal counts as a loss (p5).

> PREPARE TO PLAY

You need: 12 identifiable human models, normally on 28 mm bases; several d20s; a d6; a tape measure; terrain; paper or tokens; and an arrow/scatter die for random directions. Templates are on p10.

1. Give each player one crew sheet (p7/p8). These are fixed rosters: do not buy or add items. Both have the same roster, 24 allocated Stat points and 3 single-use Orders. Credit costs are awaiting the pricing pass.

2. Build the diagram with dense near-future terrain. Outlined blocks are solid containers/buildings, 3 inches high, with flat climbable roofs and no interiors. Hatched strips are low barricades, 1 inch high.

3. Buildings block sight and ground movement. Barricades may be crossed using the obstacle rule. Judge actual cover by how much of a target is obscured (p3). Keep routes and all objective areas reachable.

4. Roll a d20 each, rerolling ties. Higher roller chooses a zone; the other deploys first. Alternate placing one fighter wholly inside its zone until both crews are deployed. Choose each facing.

5. All start at full Wounds, Stress 0, with Move and Core available. No starting ALERT, Aim, Hidden or Marked. Roll initiative (p2).

> WHAT THIS PACKET TESTS

Movement, shooting, melee, defence, cover, ALERT, Orders, stealth, grenades, wounds, revival, Stress and morale. All required profiles are on p6.

This is a **packet-specific test scenario**. It does not add a scenario to the Master Rules System. Drones, advanced machinery, chems and campaign progression are outside this starter battle. Reset everything between games.

Read: rules p2-5; profiles p6; crews p7-8; play reference and test record p9. Print at 100% for p10.

THE ROUND, TESTS & MOVEMENT

> 1. START THE ROUND

Clear Activated and Reacted markers; reset once-per-round abilities. Keep unspent ALERT. Each fighter has one Move and one Core.

Each player rolls **d20 - their number of Broken fighters**. Higher roller chooses who goes first. On a tie, the player who did not go first last round chooses; reroll ties in round 1.

> 2. ALTERNATE WHOLE ACTIVATIONS

Activate one fighter: spend its Move and Core in either order, then the opponent activates one. Each fighter activates once per round. Ending early loses unused actions. A player with fighters left continues after the opponent has finished.

Move: Move, Climb, Jump, Sneak, Recover.
Core: Attack, Aim, ALERT, Hide, Observe, Interact, Rally, Revive, Use Item, Disengage, Carry, Loot, Secure.
Move + Core: Sprint, Charge, Aerial Assault.

You cannot exchange Move for Core. Normally make one Attack action during your activation; reactions and melee defence do not count against it. Skills can explicitly override normal limits.

> 3. END PHASE, IN ORDER

Resolve round-end effects; advance Down timers; make Break or Rally tests; score objectives and remove expired smoke/effects; restore Move and Core; check whether the battle ends. Round 6 is the last round.

> ORDINARY TESTS

d20 + Stat + modifiers - Stress >= 13

Natural 1 fails; natural 20 succeeds. Trivial tasks pass automatically. Impossible tasks cannot be attempted. Use STR for force, DEX for shooting/fine work, AGI for movement/Agile melee, INT for Observe/technical work and NRV for morale.

For skills, use the largest bonus and largest penalty; likewise for equipment. Each modifier category is capped at +/-4, but categories stack. Stats and Stress are exempt; cover and casualty conditions are separate. Extra dice are pool additions. Identical effects do not stack; reroll each die only once. Injury, initiative and distance ignore Stress.

Opposed test: each rolls d20 + stated Stat + modifiers - Stress. Higher total wins; ties favour defender. No 13+ target. Natural 20 beats other faces; natural 1 loses to other faces; matching extremes tie. Melee uses p3 instead.

> MOVE, SPRINT & SNEAK

You may measure freely. Measure between bases and along actual paths. A Move travels up to MOVE. Bases cannot pass through walls, standing enemies or gaps too narrow for them.

Sprint: spend Move + Core to travel up to twice MOVE, with no attack. **Sneak:** spend Move to travel half MOVE while keeping Hidden; the Vanguard has full-MOVE Sneak.

Only Charge may approach within 1 inch of a conscious enemy. Units within 1 inch on a reachable surface are engaged. Half-speed effects halve movement only once. An obstacle up to 1 inch high costs 2 inches to cross.

> CHARGE & AERIAL ASSAULT

Spend both actions. Choose a visible conscious enemy within MOVE +6 by a plausible route; roll d6 and move up to MOVE + result. Reach within 1 inch to Fight with **+1 die** on the primary weapon. Fail: move up to MOVE towards it, stopping outside engagement. Failed traversal or interruption can end a Charge.

Aerial Assault needs a target more than 3 inches below. It is not available from this starter board's 3-inch roofs.

> CLIMB, JUMP & FALL

Stairs/ladders use measured movement. Start a climb only if you can finish on a surface. Climb at half speed and test AGI once. Failure stays at the starting level; natural 1 falls from halfway up.

Jump gaps up to 3 inches without a test; over 3 to 6 inches needs AGI. Failure falls. Have enough movement to cross; over 6 inches is impossible. A deliberate drop up to 2 inches is safe; a greater drop needs AGI or causes a fall.

Fall: automatic hit. Roll flat d20 Injury dice vs 13+, ignoring Armour: up to 3 inches = 1 die; over 3-6 = 2; over 6-9 = 3; over 9-12 = 4; over 12 = Out of Action. A conscious survivor is Pinned.

> FACING & ENGAGEMENT

Sight uses the forward 180-degree arc at any height. Change facing during your own movement and once at the start of your Core; no free pivot on an enemy turn. Use roughly a 2-inch-tall body volume for standing models; walls and standing models block sight. Use a casualty/Pinned base footprint instead.

Engaged fighters may Fight, Recover, Rally themselves or Disengage. Move may reposition up to 1 inch in the engagement. **Disengage:** Core, AGI test, then move up to MOVE. On failure the opponent resolves a free hit first; move only if not left Pinned or incapacitated.

SHOOTING, MELEE & INJURY

> SHOOT: SPEND CORE

Choose one target in forward line of sight and weapon range. Choose the weapon before rolling. Roll one d20 per printed ATK; each result of **d20 + DEX + modifiers - Stress >= 13** is a hit. Natural 1 misses; natural 20 hits.

No generic penalty for moving or long range. Automatic uses the printed ATK, without extra dice. Accurate rerolls one missed Attack Die. Targets wholly behind a fighter prevent its reactions through the rear; they give no accuracy bonus.

Use one firearm for a ranged Attack. There is no Gunslinger in these crews. A fighter with no eligible melee weapon uses Unarmed (p6). When shooting into a friendly engagement, each natural 1 hits an involved friendly chosen by the opponent.

> COVER & AIM

Target / situation	To hit
Part obscured, less than 50%	-2 Light cover
50% or more obscured	-4 Heavy cover
Completely obscured	Cannot target
Pinned or Down in cover	Extra -2 once

Use only the strongest cover grade. Down targets take -2 even in the open; apply that condition penalty only once. Ignore a low obstacle within 1 inch of the shooter when firing over it. Height gives no automatic accuracy bonus.

Aim: spend Core for +2 to every hit die of your next attack, including a shooting reaction. Remove Aim after that attack. Repeated Aim does not stack.

> FRAG & SMOKE GRENADES

Spend Core to throw at a visible impact point within **8 inches** on a flat surface or model. Make one normal shooting test. On a hit place the template there; on a miss scatter it **d6 inches in a random direction**. Use an arrow/scatter die to choose direction.

Frag: 3-inch-diameter Blast, DMG 1. Automatically hit all models in its footprint within 3 inches above/below, including friendlies. Walls/floors block it; no reaching around corners. Make an Injury roll for each affected fighter. No second hit roll. Each grenade is single-use; two share one slot.

Smoke: 5-inch-diameter screen until this End Phase. No Injury or Stress from placing smoke. It extends upwards indefinitely and blocks sight through it between units outside. Units inside have Heavy cover; a shooter inside treats an outside target as in Heavy cover.

> FIGHT: SPEND CORE

Choose one engaged enemy. Both players build their base pool from eligible melee weapons' ATK. Add any attack-only or defence-only dice. Roll each die with **STR + modifiers - Stress**; Agile weapons use AGI instead. Results of 13+ succeed; natural 1 fails and natural 20 is a critical success.

Cancel normal successes one for one. Critical successes cancel only opposing critical successes. Normal and critical successes cannot cancel each other.

Only the **attacker's remaining successes** become hits. Excess defender successes cause no hits or Stress. An Unanswered or rear attack still allows this defence. Pinned defenders still roll; Down/Unconscious/Captured targets do not.

Gain +2 to melee hit totals against a Pinned target. Charge adds one attack die; Parry and shields add defence dice only. No universal three-die pool cap.

Example: attacker has 2 normal successes and 1 critical; defender has 3 normals and no criticals. Two normals cancel. The attacker's critical causes one hit; the extra defender normal does nothing.

Two one-handed Agile melee weapons may use both full ATK without a skill, keeping Damage/keywords identifiable. None of these fighters carries that pair. Change or draw an equipped weapon as part of the attack at no extra cost.

> RESOLVE EVERY HIT

1. Stress: each successful hit adds 1 Stress to the target, up to its maximum. Injury adds no further Stress.

2. Injury: roll one die per hit:
d20 + DMG - Armour >= 13.
Natural 1 fails; natural 20 succeeds. Ignore Stress. Armour has no separate save. Resolve the attack's Injury dice together.

3. Wounds: each successful Injury removes one Wound. If Wounds remain, become Pinned; at zero become Down. A hit that causes no Wound gives Stress only. Surplus successes do not execute a Down unit or create extra lasting injuries.

> SHOVE INSTEAD OF INJURY

Spend Core for an opposed STR test. Success pushes the target 2 inches directly away. Stop at scenery or a standing base. Hitting scenery Pins it; hitting another model Pins both. Resolve falls if pushed off an edge.

Declare targets and choices before dice. If an action is interrupted, its action cost and declared consumables remain spent. Reactions and simultaneous Return Fire are on p4.

ALERT, ORDERS & STEALTH

> GAIN AND KEEP ALERT

Spend Core, or receive an Order, to gain one ALERT token. A fighter can hold only one. Unspent ALERT persists between rounds.

Lose ALERT when you move voluntarily, take another regular action, are hit, become incapacitated or Captured, or gain a morale condition. Spending it also removes it.

> WHO CAN REACT?

Spend ALERT to perform one eligible Move or Core action during an enemy activation. A combined Move + Core action cannot be a reaction. Reactions do not use your regular Move/Core.

You must be conscious, unengaged, not Pinned, free of morale conditions, and able to see the triggering enemy in your forward arc. Meet the chosen action's range. There is no separate reaction range.

Each fighter may react **once per round**, even if it later gains ALERT again. Multiple friendlies may react to one enemy. Reactions cannot trigger other reactions in this packet.

> NORMAL TIMING

React when an enemy **starts or ends its activation** in your forward line of sight. Shooting requires weapon range. You cannot shoot partway through its movement.

Against Charge: the charged fighter may Shoot before the charger moves if it sees the charger in its forward arc and has weapon range.

> RETURN FIRE

If shot at, declare Return Fire **before any dice**. The shooter must be in your forward line of sight and weapon range. Spend ALERT and mark Reacted.

Both fighters make independent normal shooting attacks against 13+. Complete both attacks before applying either result. No extra reaction penalty and no cancelling opposing shooting successes. Both can be Downed.

> DIVE

Before an incoming shot or Charge, spend ALERT and test AGI. Success moves you up to 3 inches; failure stays in place. Become Pinned either way.

Pinning or Downing a unit cancels its unfinished action, without refunding its cost. Completed actions stand. A simultaneous Return Fire exchange still finishes.

> ORDERS: THREE PER CREW

The Veteran Leader has **2 Orders** and the Specialist has **1**. Each is single-use for this entire battle. They never refresh; cross them off the issuing fighter's card.

Spend an Order to give ALERT to a friendly within **12 inches and line of sight**. Issue during any friendly activation, or when that friendly is targeted by an enemy attack or Charge.

The recipient may react immediately if eligible. A unit can receive only one Order per round. The Order does not remove Reacted or bypass normal reaction eligibility.

> HIDE & SNEAK

Spend Core to Hide while unengaged and outside every enemy's line of sight. Gain Hidden without a test. The model's position remains public.

Sneak is a Move action: half MOVE, retaining Hidden. The Vanguard's Sneak skill allows its full MOVE of 8 inches.

Normal Move, Sprint, Charge, shooting, a loud interaction, engagement or a hit removes Hidden. At the start and end of the Hidden fighter's own actions, exposed enemy line of sight within 12 inches reveals it. An enemy within 3 inches and line of sight reveals it immediately.

> SHOOTING AT HIDDEN FIGHTERS

A Hidden unit cannot normally be targeted beyond 12 inches. Within 12 inches, a legal shot suffers **-4 to hit in addition to cover**. You still need line of sight. Being Hidden is not permission to shoot through walls.

> OBSERVE

Spend Core and test INT against one Hidden enemy within **12 inches and forward line of sight**. Success reveals it; there is no accuracy bonus. Observe is available to everyone, not just the observer.

> MARK TARGET: LEADER SKILL

Spend Core and test DEX against a visible enemy within 24 inches. On success it is Marked until the start of this Leader's next activation. Friendly shooting gains +2 against it; it loses Hidden and cannot Hide.

Your crew may have only one Marked enemy. A new mark replaces the old one. Marking is a separate action from Observe and does not itself cause a hit.

CASUALTIES, STRESS & FIELD ACTIONS

> PINNED, DOWN & UNCONSCIOUS

Pinned: spend Move to stand in place and remove Pinned, keeping any unused Core. Pinned cannot normally react. Taking a hit alone does not Pin.

Down: zero Wounds. Record the round; remove ALERT, Hidden, Marked, Aim and sustained skill effects. Keep but ignore Stress. No actions, scoring, contesting, crawling or self-revival. Bodies block neither movement nor sight.

At the End Phase **two rounds later**, become Unconscious: e.g. Down in round 2 becomes Unconscious at the end of round 4. Unconscious fighters cannot act or be revived in this battle. Further attacks on them do nothing.

A visible Down target is -2 to shoot. In melee contact, cause one automatic hit; a successful Injury makes it Unconscious. It rolls no defence. Ordinary surplus damage from the attack that Downed it does not do this.

> REVIVE: CORE + ONE MEDKIT

A conscious, unpinned, unengaged teammate in contact may spend Core and a medkit to revive a Down friendly automatically. Restore 1 Wound; clear morale; the patient becomes **Pinned with 2 Stress**.

Each patient can be revived once per battle. No new activation or restored actions: it may use an unused Move to stand and an unused Core if it has not already activated. Mark the medkit spent and patient Revived.

> STRESS: 0 TO 5

Each successful hit adds 1 Stress before Injury. Once per round, an eligible conscious fighter also gains 1 Stress when it sees a friendly go Down within 6 inches.

Subtract Stress from ordinary tests and attacks. It does not reduce MOVE or alter Injury, initiative or distance. Down/Unconscious units retain but ignore it.

> TRACK THE STATE, NOT JUST WOUNDS

Use markers for Pinned, Down, Unconscious, morale, ALERT and Hidden. Record the round a unit went Down. Mark medkits used and patients already revived. Clear only the states the relevant rule removes.

Carry, Loot, Interact and captive rescue/extraction are on p9. They are available options but do not earn extra VP in Hold the Block.

> END PHASE: BREAK OR RALLY

A conscious fighter with **2+ Stress and no morale condition** makes a Break test: **d20 + NRV - Stress >= 13**. Success clears all Stress. On failure use its current Stress:

Stress	Failure
2	Broken and Pinned
3-4	Bolting
5	Bugging Out

Broken: may only Rally itself until Stress is 0.
Bolting: next activation uses its actions to move up to twice MOVE towards safety outside enemy sight.
Bugging Out: instead moves towards the nearest reachable board edge.

These conditions prevent reactions, assistance, scoring and contesting. No immediate extra movement when gained at round end. Forced flight happens at most once per round. Fleeing an engagement gives the enemy its normal free exchange, with no escape test. Leaving the board is withdrawal, not injury.

> RALLY

If already morale-affected when the End Phase begins, Rally instead of Break: **d20 + NRV - Stress >= 13**. Success clears morale and Stress but leaves Pinned; failure changes nothing. A new failed Break cannot Rally again that End Phase.

Spend Core to Rally yourself or a friendly within 3 inches and sight. An assisting unit must be conscious, unpinned and unengaged. Pinned/Broken fighters may self-Rally; Bolting/Bugging Out need help or an End Phase Rally.

Commanding Presence: once per round, one friendly within 8 inches and the Leader's sight may use the Leader's NRV 3 for a Break test. Still subtract that fighter's Stress. This does not replace Rally tests.

> WITHDRAWAL & RESET

From the end of round 2, declare withdrawal; earlier requires both players' agreement. It is a loss. If the opponent agrees, end immediately; otherwise play on as your fighters leave board edges. End once all have escaped or become incapacitated, or the scenario ends.

This is a standalone test: no campaign income, XP spending or lasting-injury rolls. Record the result and reset both crews fully. Swap players/sides for a second game if possible.

WEAPON, EQUIPMENT & SKILL PROFILES

> WEAPONS

Weapon	ATK	DMG	Range	Hands / slots	Keyword rules
Unarmed	1	0	Melee	1 / 0	No keywords.
Carbine	1	2	24"	2 / 2	**Accurate:** Reroll one missed Attack Die.
Assault rifle	2	2	24"	2 / 2	**Automatic:** An automatic firearm rolls its printed ATK for one Ranged Attack action. This keyword adds no dice.
Sword / machete	2	1	Melee	1 / 1	**Agile:** Use AGI instead of STR for melee hit totals. Damage is unchanged. **Parry 1:** Add 1 die when defending in melee, not attacking.
Club / hammer	1	1	Melee	1 / 1	**Bash:** Reduce the target's Armour by 4 when resolving Injury rolls, to a minimum of 0.

ATK = number of d20s; DMG = Injury bonus. Two-handed firearms occupy both hands/weapon slots; Unarmed takes no weapon slot. Each fighter has one armour slot and two equipment slots.

> EQUIPMENT

Item / slots	Rules
Medkit 1 slot	Spend Core in contact with a Down teammate to revive it automatically under the Revival rules. Single-use; each patient can be revived once per battle.
Protective shield 1 slot	Occupies one hand and one equipment slot. Add 2 dice when defending in melee.
Frag grenade 1 slot / pair	Spend Core to throw up to 8 inches using the thrown-area procedure. Damage 1; 3-inch-diameter Blast. A miss Scatters. Single-use.
Smoke grenade 1 slot / pair	Spend Core to throw up to 8 inches using the thrown-area procedure. Place a 5-inch-diameter smoke screen; a miss Scatters. It clears at this round's End Phase. Single-use.

Each throw consumes one grenade; the remaining one still occupies its slot. Mark uses on the crew sheet. Placement, Scatter and smoke: p3.

> ARMOUR

Item / slots	Rules
Light armour 1 armour slot	Armour 2. Subtract from Injury rolls. No MOVE penalty.
Standard armour 1 armour slot	Armour 4. Subtract from Injury rolls. No MOVE penalty.

> SKILLS ON THESE CREWS

Skill / use	Rules
Tough Passive	Gain +1 Wound, up to your Wound limit: 3, or 4 for a crew leader.
Mark Target Core	Spend Core and test DEX against a visible enemy within 24 inches. Mark it until the start of your next activation: friendly shooting gains +2, and it loses Hidden and cannot Hide. Your crew may have one Marked enemy; a new mark replaces the old one.
Commanding Presence Passive	Once per round, a friendly within 8 inches and line of sight may use your NRV for a Break test.
Quick Passive	Gain +2 MOVE.
Sneak Passive	Sneak at full MOVE instead of half MOVE.

> STATS & LIMITS

Stats run from 0 to +6. Starting allocation depends on rank: Recruit 2 points, Fighter 3, Specialist 5, Veteran 7. This packet has one Veteran, one Specialist and four Fighters per crew.

Each complete 2 points in a Stat unlocks one associated skill for an eligible rank. Recruits/Fighters start without skills. The Leader has three; the Vanguard two. Skill effects are already included in MOVE/Wounds on their cards.

The Leader starts with 2 Wounds because of Tough. Everyone else has 1. The general limit is 3 Wounds, or 4 for a crew leader; it is not a starting allowance.

Worked pools: Vanguard: defence 5 dice + AGI 4; Charge 3 dice, DMG 1. Bruiser: defence 3 dice + STR 2; Charge 2 dice, DMG 1 with Bash.

RED CREW / FIXED TEST CREW

Identical capabilities to the other crew. Assign models R1-R6. Cross off Wounds, spent items and Orders; use tokens for current conditions. **Profiles: p6. No starting ALERT.**

FIELD ACTIONS & TEST RECORD

> THE THREE ROLLS

Hit / ordinary:
d20 + Stat + modifiers - Stress >= 13

Injury:
d20 + DMG - Armour >= 13

Break / Rally:
d20 + NRV - Stress >= 13

Natural 1 fails; natural 20 succeeds. Melee uses normal/critical success cancellation; only the attacker can turn surplus into hits. Single opposed tests compare totals instead.

> CARRY, LOOT & INTERACT

Carry: Core + STR test in contact with a Down unit. Success carries it at half speed; use only one one-handed weapon. One carrier, one load. During your activation, Drop freely into an open space within 2 inches. Failure leaves it in place.

Loot: unengaged, in contact with a Down/Unconscious casualty, spend Core to take one item automatically. Have enough hands/slots to equip it; you may drop items to make room. Dropped weapons/equipment disappear. Armour is one item.

Interact: Core, normally unengaged in contact. Trivial work is automatic; dangerous/contested work uses the appropriate Stat. This scenario needs no objective Interact test and has no machinery or terminals.

> CAPTURES & EVACUATION

Secure: unengaged in contact with a Down enemy, spend Core; automatic if no conscious unpinned enemy is within 1 inch of either model. Unconscious enemies cannot be captured. Captives cannot act or treat themselves.

Carry a captive completely off your deployment edge to extract it; the escort also leaves. A Pinned, incapacitated or morale-affected escort releases it. A friendly in contact may spend Core to free it if no capable escort blocks access. Carrying alone does not Secure. Friendly casualty evacuation needs no Secure action.

A captor may use normal Revival on a captive; revival does not remove Captured. A revived captive becomes Pinned when released.

> PRINTING

Rules p1-6; crew sheets p7/p8. Print p10 at 100%. Objective areas are 6 inches across; the 3-inch circle on p10 is the **Frag template**, not an objective.

> SCORE EACH END PHASE

> SHORT FEEDBACK

1. Any rule you could not resolve?
_____
_____

2. Any choice that felt too strong or useless?
_____
_____

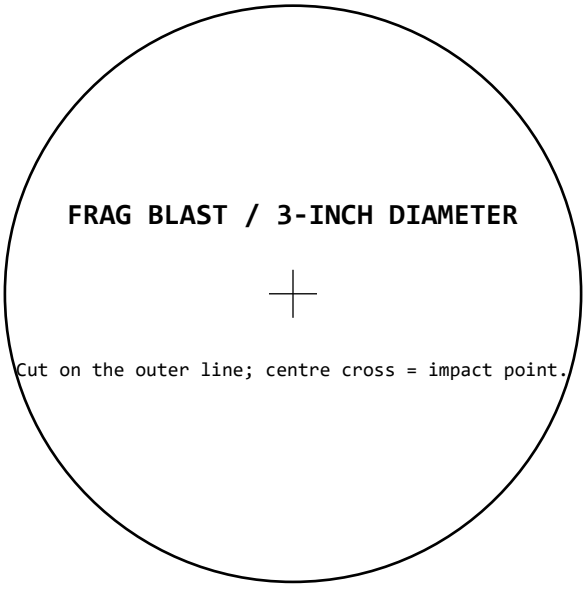

3. Did the battle feel fast, bloody and tactical?
_____
_____

If a ruling is unclear, agree a temporary answer, record it and keep playing. Note the round, units, terrain and dice when an unusual interaction occurs. A second game with players/sides swapped is especially useful.

TEMPLATES / PRINT AT 100%

Print using **Actual Size / 100%**. Check the 1-inch calibration line before cutting. Place the centre cross at the impact point. These circles show diameters, not radii.

This line must measure 1 inch / 25.4 mm.
